A Message from the President

Dear NCNMLG Members,

At the very least I hope you all survived Y2K as a non-event, and, since the planet did not wobble off its axis with the entrance of the new millennium, it appears we will continue working on the future success of our Chapter.

The end of a decade or a year, for that matter, is usually an occasion for serious reflection. Thinking along those lines, it then would appear that ushering in the new millennium holds an even greater opportunity for serious reflection on the creation of resolutions for the future success of our Chapter.

It is not enough to be prepared and flexible as we enter the new millennium. I suggest that we resolve to exploit change by creating our response to it to our advantage. We can do that by trying to turn everything we do to our advantage instead of resisting it. Let's invest our energies in accomplishing our goals and objectives as defined in our Strategic Plan. I suggest that we resolve ourselves resourcefully in exploring, experimenting and learning how to accomplish what we have defined as valuable and worthwhile. I suggest that we set forth with a new resolve to do things differently because change is our most promising solution. A wise person once said, "The one inescapable requirement for success is that we ourselves must change." Please join me in resolving to make NCNMLG the best Chapter in MLA that meets the professional needs of its membership. The success of our Chapter will reflect the success of its members.

Our Chapter Meeting is on Friday, February 11th at 3:30 pm. at the Joint Meeting in San Diego. We will be voting on the proposed increase in NCNMLG membership dues and I hope ALL of you can be there.

Warmest regards,
Billie White
Your President

### New Features of the NCNMLG Newsletter

In this issue of the Newsletter, you will find two new features which I hope will become regular features. The first is the column entitled Geek Speak which will attempt to clarify topics in information technology. I would like to thank Cynthia L. Henderson for writing this issue's very informative column on search engines. You will also find a new column on the professional activities of your NCNMLG Board members. I would like to expand this to all NCNMLG members so, if you have performed a professional activity (presentation, publication, poster session, etc.), please send me an email (ssc1@axe.humboldt.edu) and I will add your activity to the next issue of the Newsletter.

The NCNMLG Newsletter is published 6 times a year.
(July/August, September/October, November/December, January/February, March/April, May/June)

Copy for the March/April newsletter is due by the 15th of March.

The NCNMLG Newsletter is available in PDF format at the NCNMLG Website at: <http://ncnmlg.stanford.edu/> In order to read the newsletter in this format, you will need the Acrobat Reader plug-in which can be downloaded for free from Adobe Systems’ web site <http://www.adobe.com/proindex/acrobat/readstep.html>. Once Acrobat Reader is installed, click on the PDF file icon for the newsletter and Acrobat Reader will open up on top of your web browser and display the document right on your screen.
News & Announcements

MLA Mentoring Task Force

The MLA Board of Directors appointed a task force to define and develop a unified, comprehensive concept of mentoring within MLA. The Task Force is particularly interested in receiving answers to the following questions:

1. What services and features would you like to have implemented in the ideal MLA Mentor Program?
2. If MLA were successful in launching a Mentor Program with service features, which are of value to you, would you participate either as a mentor or a mentee?
3. How much time would you be able to commit to participation in a Mentor Program?

Please email or fax comments and suggestions to:

Ysabel Bertolucci, AHIP
Email: ysabel.bertolucci@kp.org
Fax: 510-596-1500

Kaiser Permanente Medical Center
280 West MacArthur Blvd
Oakland, CA 94611

SPRING CE COURSE

On March 13, 2000, Nancy Ottman Press will offer Teaching the Adult Learner in the Library Setting at Community Hospital of the Monterey Peninsula (CHOMP). This successful course was last taught at MLA in Chicago.

The course will help you improve your ability to teach adults and demonstrate online resources. You will learn how to recognize characteristics of targeted learners and choose appropriate teaching methods. Participants will get a chance to teach for 5 minutes with constructive feedback from the instructor and class members. You will also be videotaped (for private viewing later!). This class will make you a more confident and comfortable teacher!

In addition to a great class, CHOMP’s new Comprehensive Cancer Center, near the course classroom, has an outstanding art collection and resource center for you to enjoy. And of course plan to spend the Sunday before or after in Monterey or Carmel...

Inserted in this newsletter is the flyer with all the registration information. Remember, space is limited, so sign up early!

-Susan Ulrich & Candace Walker, CE Co-Chairs

(continued on page 5)
BayNet HTML Class

Taught by ROY TENNANT, Project Manager, Digital Library Research and Development, at UC Berkeley's library.  
Sponsored by BayNet.

**When:** Saturday, April 1, 8:30 am - 1:00 pm  
**Where:** Moffit Library 350-C, UC Berkeley Campus

Refreshments and Sign-in 8:30-9:00 am  
**Space is limited to 18 participants per session to allow a workstation for each attendee.**

**Deadline to register:** Tuesday, March 28, 2000  
Checks MUST be received before your registration is confirmed.

For registration information, call Andy Kivel, Diablo Valley College, 925-685-1230.  
For program information, call Barbara Kornstein, UCB, 510-642-3939.

There is only so much that can be accomplished on the Web using HTML. At some point, Web authors and managers realize they must have more capabilities, more control, and fewer errors. Client-side scripting with Javascript, Dynamic HTML (DHTML), and other technologies may be fun but is extremely vulnerable to breaking (some clients simply do not support them). Presently, the only fail-safe method to achieve greater control over your user's Web interaction is to do Common Gateway Interface (CGI) programming. And the single most popular computer language for CGI programs is Perl. This workshop will provide you with the basic information, tools, exercises and resources you need to get started programming Web CGI programs in Perl. The focus will be on simple, understandable techniques for writing and debugging useful Web programs.

Reports on Recent Workshops

**Finding Solutions to the Retrieval Problem: Emerging Trends in XML and Search Engines**  
by Jane Ibl (reprinted from the Nov/Dec 1999 Faultline of the San Andreas Chapter of SLA)

More than 100 attendees gathered on Friday October 22nd for the San Andreas Fall Professional Development workshop. The half-day event was entitled “Finding Solutions to the Retrieval Problem: Emerging Trends in XML and Search Engines” and was held in Menlo Park at the Tyco Electronics (formerly Raychem Corporation) auditorium. Guests were offered an assortment of breakfast treats as well as fresh fruit, and hot coffee and tea. After a brief welcome message from Sandy Hirsh, Professional Development Committee, Mike Chase took center stage on behalf of Tyco Electronics, thanking all for attending. Mike informed the group that this workshop marked the last event that would ever be held in the auditorium as the building will soon be up for lease and may be converted to office space. San Andreas professional development events have traditionally been held at the Raychem facilities for the last six to seven years and it is a shame to lose such a wonderful and convenient meeting facility.

Due to unforeseen circumstances, it was necessary to re-arrange the order in which our three speakers gave their presentations. Debora Seys, Information Solutions Specialist at HP Labs Research Library in Palo Alto, spoke first, providing a side-by-side comparison of the XML (extensible Markup Language) and MARC formats. She cited examples of how XML is being used today to exchange financial information, and to present chemical structures and mathematical notations in their native

(continued on page 6)
formats. The data can be viewed and manipulated on the Web because of the underlying XML structure. XML differs from SGML and HTML in that it allows data to be self-describing.

Ben Trafford, General Manager of Exemplary Technologies, a startup in San Francisco, sparked a lively debate on the XML standards as they stand today, and injected great humor into his presentation. He discussed SGML as the predecessor of XML technology and the role of tags in adding structure and meaning to a document. XML can be used to give an attribute or “role” to literally every word in a document, allowing for a much wider range of search options. Standards to keep tabs on include the XML Query Language, the Text Encoding Initiative (TEI) and work being done by the Daisy Consortium. The XML Query Language (XQL) standard will create a language that will allow the intelligent querying of XML documents and other objects, similar to Structured Query Language (SQL). The Daisy Consortium is working on a data type definition (DTD) that will allow documents such as poetry to be structured and presented in such a way that their contextual meaning can be effectively conveyed to the visually-impaired. The DTD will focus on capturing the significance of punctuation, poetic meter, and other features in a body of text. Ben recommends the following books for further reading on XML: The XML Companion by Neil Bradley (ISBN: 0201342855) and XML Specification Guide by Liam Quin (ISBN: 0471327530).

Avi Rappoport, Principal Consultant at Search Tools Consulting, rounded out the workshop by discussing how different industries are formulating their own DTD’s. She believes that in the near future, items such as PDA’s and cell phones will need to incorporate browsers that can recognize and translate XML tags. Currently Internet Explorer 5.0 is the only browser available that offers XML support. Goxml.com is an example of an engine that indexes and searches XML documents on the Web. More details on some of the areas that Avi covered can be found at www.searchtools.com/related/xml.html.

---

Ava Goldman of the Sierra-Nevada Chapter of the Special Libraries Association submitted the following reports of recent meetings/workshops:

December 2 Dinner Meeting: "The Library as Place"

Our Chapter was privileged to have Michael Gorman, Dean of the Henry Madden Library, California State University, Fresno, an award-winning cataloger and author on library topics, speak at length on December 2, 1999 about “The Library as Place”, before a record crowd of 62. His remarks were largely drawn from a chapter of his forthcoming book on this subject. This was a return visit, as Dean Gorman had spoken to us several years ago at the Noodle Express in Davis. A filling family-style meal of Chinese food at the Royal Hong King Lum restaurant on downtown J Street and a drawing for a door prize of an Entertainment card, won by Margaret Durkin, preceded his speech.

His speech emphasized the importance of human contact in creating and sustaining a community of library

(continued on page 7)
users, and decried any unthinking stampede towards virtual libraries as a substitute for human interaction, fostered by the proliferation of Internet users in recent years. He did say that the Net had its place in answering reference questions, though. Dean Gorman discussed the traditional functions that public and university libraries serve and their importance in the community as a gathering place for reading, studying, learning, and meeting. He gave examples of notably well-designed new library buildings and mentioned the importance of having a reference desk staffed by professional librarians and study areas, not just computer terminals at tables.

He entertained questions from the crowd after his talk. He stressed that there is a huge difference between the use of unassimilated bits of misinformation gleaned from the Internet and the education and knowledge developed by the pursuit of critical thinking skills, derived from an ongoing reading program. The first is a type of ignorance and by contrast, the second should be a goal of all educational programs, including postsecondary. The danger is that one can be trained for a vocation and, with the advent of televisions and computers, not become well-educated.

As a leading commentator on our profession, Dean Gorman caused us to reflect deeply on the values we hold as information professionals and the services we provide. His dry, understated British sense of humor underscored the serious points he made. As in the past, his speech was much-anticipated and very well-received, providing a memorable contribution to yet another successful chapter program.

Team Building Workshop

On Friday, October 22, 1999, an all-day chapter workshop with 31 attendees, sponsored by OneSource Information Services, Inc. of San Francisco, was held at the Canterbury Inn in Sacramento. Cindy Medrivilla, an experienced workshop presenter, doctoral candidate at UCLA Department of Information Studies, and part-time faculty member at San Jose State University School of Library and Information Science, moderated a lively discussion on teambuilding, leadership, and communication. Beginning by listing and comparing the emerging versus the traditional roles of librarians and forces instigating change, we then focused on leadership qualities and characteristics.

To develop leadership skills, several self-assessment tools were in the handouts. To understand motivation, we discussed the best jobs we had ever had and why we had quit jobs. Delegation, supervision, and organizational structures were all touched on. An excellent bibliography of books and articles on all topics covered was provided.

Participants evaluated the workshop highly. Although time constraints necessitated a quick overview of topics, as each subject broached could encompass a whole course, Cindy's interactive instructional style made the learning process engaging. "Very meaty, with no fluff" was one attendee's comment. The session was quite stimulating and thought-provoking, as librarians from a wide range of backgrounds shared their experiences and insights. I was proud of this program's success and SNC's ongoing provision of outstanding continuing education opportunities for the local library community.
Inmagic Users Group Meeting

On Tuesday, November 30, 1999, from noon to two PM, twenty-two librarians and programmers who currently use Inmagic software met at the California Department of Food and Agriculture, Plant Pest Diagnostics Center, on Meadowview Road. Our host, Khiet Le, the Center librarian, treated us to eggrolls before we viewed slides presented by our speaker Ken Noble, of Crew-Noble Information Services, Inc., in Danville. He answered questions and provided handouts about Inmagic's new version 4.0. Crew-Noble is an authorized reseller of Inmagic products, which means they provide sales, training, and support for Inmagic's software. After the meeting, a few of us toured the library, which has high-density movable metal compact shelving.

Inmagic products captured 75% of the U.S. market for special libraries software in 1998. Chizuko Kawamoto, an active Sierra Nevada chapter member who arranged this meeting, is the Coordinator of the Sacramento Region Inmagic Users Group. This meeting gave many of us our first opportunity to meet other Inmagic software users in person and to share our experiences. Several state agency librarians have written justifications to purchase Inmagic software. Contact Ava Goldman at phone: 916-658-1533 or email: ava_goldman@calpers.ca.gov if you would like to see any of them.

Also submitted by Ava Goldman, this item has been circulating around cyberspace for a while:

Introducing the new Bio-Optic Organized Knowledge device, known by the trade-name of "BOOK".

BOOK is a revolutionary breakthrough in technology; no wires, no electric circuits, no batteries, nothing to be connected or switched on. It's so easy to use even a child can operate it. Compact and portable, it can be used anywhere, even sitting in an armchair by the fire, yet it is powerful enough to hold as much information as a CD-ROM disc.

Here is how it works: BOOK is constructed of sequentially numbered sheets of recyclable paper, each capable of holding thousands of bits of information. The pages are locked together with a custom-fit device called a binder, which keeps the sheets in their correct sequence. Opaque Paper Technology (OPT) allows manufacturers to use both sides of the sheet, doubling the information density and cutting costs. Each sheet is scanned optically, registering information directly into your brain. A flick of your finger takes you to the next sheet. BOOK may be taken up at any time and used merely by simply opening it.

BOOK never crashes or requires rebooting. The Browse feature allows you to move instantly to any sheet, and move forward or backward as you wish. Many come with an Index feature, which pinpoints the exact location of any selected information for instant retrieval. An optional "BOOKMARK" accessory allows you to open BOOK to the exact place you left it in a previous session, even if the BOOK is closed.

You can also make personal notes next to BOOK text entries with an optional programming tool, named: "Portable Erasable Nib Cryptic Intercommunication Language Stylus" --or-- "PENCILS". Portable, durable and affordable, the BOOK is being hailed as the precursor of a huge entertainment wave. BOOK's appeal seems so certain that thousands of content-creators have committed to the platform and investors are reportedly flocking to the new phenomenon.

Look for a flood of new titles soon.
Positions Available

MEDICAL LIBRARIAN
Children's Hospital, Oakland CA

Children's Hospital Oakland is seeking applicants for the position of Medical Librarian in the hospital's Gordon Health Sciences Library. Children's is a private 205 bed acute care facility which maintains nationally recognized pediatric teaching and research programs, including a 3-year pediatric residency. The Gordon Health Sciences Library, located in the hospital's Outpatient Center, supports Children's clinical and educational missions. Duties: The Medical Librarian, responsible to the Medical Director, administers the department and directs its operations. Duties include the supervision of staff; budget preparation and management of departmental financial resources; promotion and maintenance of effective intra and interdepartmental working relationships; assessment of the needs of personnel with regard to the library's print and online collections and services; reference assistance, including web based online database searching; selection of books, journals, and technological resources; participation in cooperative interlibrary loan agreements; and evaluation of trends in the marketplace which could enhance operations. Requirements: A Master of Library Science Degree from an ALA accredited program; at least two years of experience in a health sciences setting, with hospital based experience preferred; familiarity with personal computer technology and programs, the Internet, MEDLINE and other databases, and integrated library systems. This position will become available in July 2000. Salary: $41,517-$60,195. Interested applicants should mail or fax (510-601-3963) a cover letter and resume to Leonard P. Shapiro, Medical Librarian, Children's Hospital Oakland, 747 - 52nd Street, Oakland, CA 94609-1809

Manager of Library Services/ CME Coordinator
O'Connor Hospital, San Jose CA

O’Connor Hospital, a member of Catholic Healthcare West, is seeking a full time Manager of Library Services and CME Coordinator. O’Connor Hospital is an acute care Catholic hospital with a mission of providing health services to the community and the poor. The medical library provides information services to all hospital employees and medical staff physicians. The position offers competitive salary and benefits. This is a solo librarian position which requires the ability to juggle multiple responsibilities.

Responsibilities

- Provide literature search and interlibrary loan services to hospital and medical staff
- Maintain and develop the journal and book collection to support hospital services
- Work closely with the physician chairman of Continuing Medical Education (CME) to coordinate weekly CME programs and ensure that all CME accreditation requirements are fulfilled
- Provide all library services within an established budget
- Supervise volunteers

Qualifications

- MLS/ MLIS degree

(continued on page 10)
• 2+ years of medical library experience; experience as a solo librarian preferred
• Demonstrated knowledge of medical research resources, including PubMed, Ovid, and the Internet
• Demonstrated knowledge of Docline interlibrary loan system
• Strong knowledge of Windows 95, Microsoft Office applications, and Netscape Communicator
• Familiarity with Inmagic DBTextworks preferred
• Knowledge of cataloging
• Excellent organizational skills, careful and detail oriented
• Ability to work well with physicians and hospital employees. Excellent communication skills.

To Apply

Send resume to:

Human Resources - Reiko Kawano
O’Connor Hospital
2105 Forest Avenue
San Jose CA 95128

Geek Speak

Is There a Top Search Engine?
by Cynthia L. Henderson

There are a lot of search engines available to search the web. Besides the ubiquitous Yahoo, there is AltaVista, AskJeeves, Excite, FastSearch, Go/Infoseek, Google, GoTo, HotBot, Looksmart, Lycos, Netscape, NorthernLight, and Snap. In addition to these more or less well known search engines there are approximately 1200 other search engines and directories that you might use to help you find information on the web. So which one is the best or which ones are the best to use? As of January 17, 2000, FastSearch announced that it has passed the 300 million-page mark in indexing the web giving it the largest index of any major search engine. Based on a study done by Nature in August of last year, the web was estimated to be some 800 million pages large, and at that time, AltaVista had the largest index at 200 million pages, approximately a quarter of the web. Of course since that time the web has grown too, so the indexing of 300 million web pages, as amazing as that is, most likely only represents approximately 30% of the web. Indexing all of the web is definitely a moving target so it will be interesting to see just when they will claim to have indeed indexed all of it (and for how long!!) The company’s URL reflects their ambition: http://www.alltheweb.com, and they plan on reaching that goal by the end of this year. So, if size matters and you are looking for a narrowly defined topic, then obviously FastSearch is a good place to start looking. If flexibility is also a concern, AltaVista, HotBot and NorthernLight offer large indexes as well as power searching tools that are a favorite of individuals looking for scientific or technical information. AltaVista, Go, HotBot, Lycos, and Snap also have the capability to search for images, audio and video. NorthernLight offers access to a special collection of resources not easily available to other
search engines. In addition some search engines such as AltaVista, Excite, FastSearch, Go, Hotbot, Lycos, Snap and Yahoo include an advanced search page that allows for use of some form of Boolean logic in order to refine your search. So is there a top search engine? Not really. There are search engines that are better to use when searching for specific formats of information, such as images, audio, or video, and there are search engines that have more flexibility in the ways that you can search than others. But they all do pretty much the same thing in retrieving information with varying degrees of success and many times it is simply a matter of personal preference which search engine an individual uses. For a more in depth discussion of search engines, what they do, how they do it and how big they are getting, take a look at Search Engine Watch <http://searchenginewatch.com>. Good luck and happy searching!!

http://www.altavista.com/ (has option of Boolean, images, audio, video)
http://www.askjeeves.com/ 
http://www.excite.com/ (has option of Boolean)
http://www.alltheweb.com/ (has option of Boolean, images, audio)

**AHIP: WHY NOT?**

by Justine Roberts

Are you proud of being a medical librarian? Is keeping up with the profession one of your priorities?

I'd like to think most NCNMLG members would answer YES to these questions. But, ironically, most of us are not members of the Academy of Health Information Professionals (AHIP), our profession's credentialing program! Why not?

In the next few NCNMLG Newsletters, I'll try to provide some information about Academy membership that I hope may start you on your way to earning this credential. I'd especially like to consider any questions and doubts you may have. Please write to me if there's any possibility I can help: jr4939@itsa.ucsf.edu.

Disclaimer: I'm neither an official MLA spokesperson, nor sage.

First, let's get some negatives out of the way: To earn Academy membership:

- you don't need to be working full time
  Full-time work is defined as a 24-40 hour week during at least 11 months a year. Equivalent work experience, on a part time basis is acceptable. Credentialing Committee members can help resolve questions about your own schedule. Send inquiries to the MLA credentialing liaison (see website address below).

(continued on page 12)
• you don’t need to have an MLS from an ALA-accredited institution
Both a 6th year certificate from an ALA accredited school, or a post-baccalaureate degree, accredited by a member of the Council on Post-Secondary Accreditation (COPA), are acceptable. In the latter case, evidence of knowledge in the appropriate fields is needed.

• you don’t have to be an MLA member
Membership is open to non-MLA members who meet the required education and/or experience requirements. The application fee is higher, but a person may choose to join and simultaneously apply for Academy membership at the lower member rate.

• you don’t need an American or Canadian library degree
Certain foreign library science degrees are considered equivalent to an ALA-accredited degree for AHIP credentialing. Write or phone ALA at (312) 944 6780.

• you don’t need to have 5 years work experience
Provisional membership for a year, renewable annually for up to 4 times, is available to people with acceptable degrees (see above) and documented coursework in the essential areas. (For the latter, see http://www.mlahdq.org/academy/knowledge.html)

Surf to http://www.mlahdq.org/academy/index.html for further information about these and other Academy questions.

---

Professional Activities of the NCNMLG

Sharon S. Chadwick, Newsletter Editor, made two presentations recently. She presented a poster session coauthored with Mary H. Kay of Humboldt State University Library, Preparing Professionals for the New Millenium: Information Competence for the Beginning Rural Nurse, Social Worker, and Journalist, at the 7th Annual California Academic & Research Libraries Conference held at Asilomar during October. She also presented a paper coauthored with Marc Langston (CSU Chico Library) and Kittie Henderson (EBSCO) entitled JACC: The California State University Journal Access Core Collection Project at the January 2000 Midwinter Meeting of the American Library Association in San Antonio TX.
Julia Kochi, Nominating Committee Chair, and Melissa Just will present a CE Course entitled Creating Effective Presentations Using Microsoft PowerPoint at the MLA/CHLA 2000 Meeting in Vancouver, British Columbia on Friday, May 5.

DIRECTIONS FOR JOINING THE NCNMLG LISTSERVS

General listserv: ncnmlg@krypton.stanford.edu  Board listserv: ncnmlgbd@krypton.stanford.edu

Everyone is encouraged to subscribe to the general listserv and board members should subscribe to the board listserv. These are very low-volume lists designed for communication of important information from NCNMLG to its members. The only time you will need to unsubscribe is when your e-mail address changes. In this case two actions are necessary. You will need to unsubscribe your old e-mail address and then subscribe the new address. This keeps our listserv current!

TO SUBSCRIBE:
send a message to: majordomo@krypton.stanford.edu
leave the subject line blank
type in body of the message: subscribe ncnmlg or subscribe ncnmlgbd

TO UNSUBSCRIBE:
send a message to: majordomo@krypton.stanford.edu
leave the subject line blank
type in body of the message: unsubscribe ncnmlg xxxx or unsubscribe ncnmlgbd xxxx

action [listserv] {e-mail address}
where xxxx = old e-mail address

TO SEE WHO IS ON THE LIST:
send a message to: majordomo@krypton.stanford.edu
leave the subject line blank
type in body of message: who ncnmlg or who ncnmlgbd

TO SEND A MESSAGE:
send a general e-mail: ncnmlg@krypton.stanford.edu
send a Board e-mail: ncnmlgbd@krypton.stanford.edu
